

Every enquiry answered in five seconds, and booked into your calendar before it goes cold.

A WhatsApp assistant that greets every lead the moment they submit, shares photos and the brochure on request, offers real slots from your sales calendar, and books the site visit — while writing all of it into a CRM your team can actually see.

What I found before writing this

On **Tuesday 19 August at 3:10pm** I submitted an enquiry on your **Project Name** advertisement. The first response came **41 hours** later.

That is a coverage problem, not a team problem. Enquiries arrive at night, on Sundays, and mid-site-visit — and a buyer comparing three builders talks to whoever answers first.

What happens instead

Buyer submits your ad or website form → answered in under 5 seconds, day or night

WhatsApp: "Welcome to **Your Company**" + three buttons

- View Details → photos, price, carpet area, possession, RERA
- Download Brochure → your PDF, delivered in the chat
- Schedule Visit → live slots from your calendar → buyer picks one
→ event created, sales manager invited

Anything they type instead → answered from your project data, never invented

Never replied? → follow-ups paced by how warm the lead is

What you get

Instant reply, every time

Nights, Sundays, festival weekends. The first response is never late again, and it arrives on the channel Indian buyers actually read.

Site visits booked without a call

Real availability from your calendar, 45-minute slots inside office hours. The event lands on your sales manager's calendar with the buyer invited.

A CRM that fills itself

Every lead, message, and booking in one Google Sheet your team already knows how to use. Nothing to learn, nothing to log by hand.

Leads scored, not just collected

Each enquiry graded hot, warm, cold or timepass, so your team calls in the right order instead of top to bottom.

Follow-ups that stop on time

Hot leads chased every 3 days, cold every 21, and a hard stop at six. Anyone mid-conversation is skipped automatically.

A live dashboard

Pipeline, conversion by source, upcoming visits, and which project is actually pulling demand.

Investment

PACKAGE	WHAT IS INCLUDED	SETUP	MONTHLY
Starter	One project. WhatsApp menu, details, brochure, site-visit booking, Sheets CRM, calendar.	₹ 25,000	₹ 6,000
Growth RECOMMENDED	Starter plus AI replies to typed questions, lead grading, the follow-up engine, and the live dashboard.	₹ 50,000	₹ 12,000
Multi-project	Three or more projects, multiple sales users, routing by project, monthly performance reporting.	₹ 90,000	₹ 20,000

Monthly covers hosting, monitoring, template and content changes, and support. Setup billed 50% to start, 50% on go-live. **Running costs are yours, unmarked-up:** WhatsApp conversations billed by Meta per conversation, AI usage billed by Anthropic — both on your own accounts, so you see exactly what the channel costs. Hosting is included.

Pilot terms — because you have not seen this run on your leads yet

Setup at **half the price above** for the first project. In return, once it has run 60 days I would like a short written testimonial and permission to reference the results.

And if it does not work, you do not pay. If it has not delivered **20** qualified WhatsApp conversations in 30 days, I refund the setup in full and you keep the CRM sheet and everything in it.

What I need from you

- A phone number for WhatsApp Business that is **not** already on regular WhatsApp
- Meta Business verification for your company — your team completes this, it can take several days
- Project content: photos, price range, carpet area, possession, RERA number, brochure PDF
- A Google account for the CRM sheet and the sales calendar
- One person on your side who can answer questions during setup

Timeline

- **Day 1-2** — accounts, credentials, project content loaded
- **Day 3-5** — WhatsApp templates submitted to Meta for approval
- **Day 5-7** — end-to-end testing on your numbers
- **Go-live** — ads pointed at the system, team walkthrough

Meta's verification and template review are outside my control and are the usual reason a go-live slips.

Worth being clear about

This books site visits — it does not close sales. Your team still has to show up and sell. What it removes is the reason good leads go cold before anyone speaks to them.

The CRM sheet, the WhatsApp number and the Meta account are yours and stay in your accounts — buyer data never leaves them. Stop the monthly and you keep every lead, message and booking: you lose the automation, not the record. Thirty days' notice either way, no lock-in.
